Modern Methods and a Controversial Surname: Plant

John S. Plant
Keele University

In the past few years, DNA testing has begun to contribute to our understanding. It is currently emerging more clearly which surnames are multi-origin, originating with many different forefathers, and which descend from a single male ancestor. For example, in 2000, Bryan Sykes published a pioneering study that had DNA tested several volunteers with his own surname. It had been believed to be a topographical name: the word *sykes* is often used in Yorkshire to describe streams, springs, and boundary ditches. However, some are now arguing that Sykes would better be a locative name, from a single place; for it has single-ancestor origins. Some entries in surname dictionaries need reconsidering.

As a case study, I shall describe the application of modern, multidisciplinary methods to the surname Plant, which has been ascribed a different meaning each time an authority has written about it. The recent emergence of a different view about this name’s origins has prompted a reassessment of its meaning.

A notable work is *A Dictionary of British Surnames* by P. H. Reaney, who listed many of the earliest forms of by-names. He complained that the earlier work of Ernest Weekly rarely gave the etymologies of proposed meanings; though now, in his turn, Reaney is being criticized for early by-name meanings which may not connect through to the hereditary surnames of the modern era. More emphasis is now being placed on the geographical distribution of each developing surname; this might identify a locality for its origins.

---

Figure 1: Distribution of the Plant surname: (a) in pre-1700 IGI records; and, (b) in death registration records for 1842–46. The IGI data is taken from the 1984 version of International Genealogical Index and the deaths data is taken from D. Hey, 'The distinctive surnames of Staffordshire', *Staffordshire Studies*, 10 (1998), 1–28 (p. 14). The county boundaries are those of 1881 and they are subject to copyright as described in the Acknowledgements.
When discussing the distinctive surnames of Staffordshire, in 1998, David Hey presented some name distribution data, which indicated that Plant was a multi-origin surname. An indication of this and some other data is shown in Figure 1: for (a) pre-1700; and, for (b) 1842–46. Reaching back earlier, the largest cluster can be traced back to east Cheshire and north Staffordshire in late medieval times. There was also an early Lincolnshire cluster (Figure 1(a)), which can be dated back to 1344; and this was just across the Wash from medieval evidence for the Plant name in north Norfolk.

In the past three years, DNA evidence has indicated that Plant is a single-family name, despite its being widespread and prolific. Fourteen adult male Plants, who have diverse genealogies (Table 1), have agreed to be DNA tested and nine have matched exactly or nearly. When half or more of those with a single surname match, the name is said to be ‘modal’ or ‘single-ancestor’, that is to say their male lines converge back to a single male ancestor in a timescale of the past several hundred years. It is not expected that everyone with a single-ancestor surname will match, exactly or nearly, because it can be expected that there will have been false-paternity events, such as infidelities or adoptions, down the centuries. The DNA evidence indicates that Plant has relatively few mismatches and so it can be taken to be a single-ancestor name—this has implications for its origins and early ramification.

Though the situation before the mid-fourteenth century remains less certain, the Plant family in its main homeland can now be taken to track back, fairly straight-forwardly, broadly around a single locality, to the later-fourteenth century in east Cheshire. In east Cheshire,

6 Patent Rolls 1344 May 2, Westminster. License for the alienation in mortmain to the prior and convent of Bolyngton [...] by John son of Alan Plant of Burgh, of a messuage in the same town [Burgh by Waynfleet].
7 There are an estimated twelve thousand Plants living in England and Wales, where Plant is the 617th most common surname, and there are a further five thousand in the USA.
Honde Plonte was a resident of Lyme,\textsuperscript{5} which adjoined the new de Warenne seat of Poynton; and, by 1383–84, Ranulph Plont was paying rent for a parcel of land, formerly belonging to John Walshe, at Rainow in Macclesfield manor just to the south.\textsuperscript{9} His son John Plont senior had sons William Plont and John Plont junior—it may have been the latter who appears as John Plant junior in a 1445 list of ninety-eight Knights, Gentlemen and Freeholders in Macclesfield hundred.\textsuperscript{10} Even by the late-fourteenth century, the Plant name had spread to the northernmost tip of Staffordshire to the south.\textsuperscript{11}

Earlier, there is evidence for Plant and similar names that dates back to the thirteenth century, with several connections to diverse de Warenne lands (Appendix A). It now seems likely, though not proven, that this was a widespread thirteenth-century family which supplied the genetic male-line ancestors of the modern, single family of Plants. There is explicit evidence that the Plonte name was hereditary by 1329; there is reference to ‘Robert Plonte, son of Walter Plonte’ in Bath.\textsuperscript{12} The Plant name had evidently arrived at de Warenne lands near Bath in Somerset with a Robert Plonte, by c.1280, from de Warenne lands near Lewes in Sussex. This suggests that, from as early as this, scattered evidence for the Plant name might represent a single, ramifying family.

This outlines the evidence for the name’s origins: for the modern, single family of Plants, the name is single-ancestor. Aided by this and other findings, I shall review opinions for the meaning of Plant.

Diverse opinions have been published for the Plant name’s meaning. In his *A Dictionary of Family Names of the United Kingdom*, M. A. Lower wrote in 1860:

A family in humble circumstances at Kettering bear the ancient royal name Plantagenet, though now it is commonly corrupted to Plant.\(^{13}\)

Of course, the controversy did not stop there. Such claims as Lower’s were criticized in 1873 by Revd C. W. Bardsley, who regretted that ‘English surnames have been made the subject of endless guessings’.\(^{14}\) In 1916, Ernest Weekly suggested the meaning ‘from the plantation’ (topographical) for *de la Plaunt*; and he opined that Plant was a nickname with various senses: ‘sprig’; or, ‘cudgel’; or, ‘young offspring’.\(^{15}\) In 1958, P. H. Reaney set aside these conjectures and proposed the different meaning ‘gardener’; and this opinion has been carried through to the third edition, in 1991, of his Dictionary.\(^{16}\) In 1988, Patrick Hanks and Flavia Hodges adhered to Reaney’s opinion that Plant is a ‘metonymic occupational name for a gardener’, adding that it was ‘perhaps also a nickname for a tender or delicate individual’.\(^{17}\)

Some provisos need to be added to Lower’s Plantagenet claim. Eventually, Y-DNA evidence from the skeletal remains of the Plantagenets might disprove a male-line relationship between them and the Plants; in the meantime, a note of caution is needed. The early evidence for the Plantagenet name is less comprehensive than many people imagine. Geoffrey, count of Anjou, is recorded with the name\(^{18}\) *Plante*

---

\(^{18}\) *The Complete Peerage or a History of the House of Lords and all its Members from the Earliest Times*, vol. 11 edited by G. H. White (London, 1949), Appendix
Genest by Wace (1135–74)\textsuperscript{19} or Plantegenest by Jean de Marmoutier (c.1170–75).\textsuperscript{20} There is also reference to an unknown Galfrido Plantegenet in the Close Rolls (1266). It is not until 1448, however, that the royal House of York were using Plantagenet as a hereditary surname.\textsuperscript{21}

There is insufficient evidence to sustain fully Lower’s contention that Plant is a corruption of Plantagenet. I shall return to a weaker version of this claim, but only as an illustration of a wider theme: there could have been a contribution to the Plant name’s meaning from a sense that can be ascribed to Plante Genest.

Moving on to more recent opinions, I shall argue, in particular, that the ‘offspring’ meaning of Plant should not be ignored. P. H. Reaney ignored this suggestion of Weekly’s, even though he recognised similar meaning for other surnames, such as Child. Weekly opined that ‘young offspring’ was a nickname. However, the ‘offspring’ meaning can instead be assigned to the ‘surname of relationship’ category, as has been adopted for such names as Child, Vaughan, and Younger.\textsuperscript{22} The Oxford English Dictionary (OED) lists the archaic meaning ‘young person’ for the word plant,\textsuperscript{23} and this can be explained as arising from a metaphorical grounding of ‘offspring’ on the Old English and Ancient French meaning ‘offshoot’ of plante: this grounding is an instance of the timeless ‘People are Plants’ metaphor,\textsuperscript{24} involving the

\textsuperscript{19} G. pp. 140–41, note (e).

Great Chain of Being. ‘Young person’, or ‘offspring’, is the only OED definition that fits the Plant name directly.

It is strange that Reaney omitted this opinion, ‘offspring’, for he criticized C. L’Estrange Ewen with ‘Worst of all, he rejects sound etymologies which do not fit his preconceived theories’. Why did Reaney lay himself open to his own criticism? Though now overturned by the DNA evidence, there are at least two possible explanations. First, Reaney may have believed that an occupational meaning ‘gardener’ for Plant, rather than ‘offspring’, was more in keeping with a widespread multi-origin name. However, Plant is not multi-origin as had been thought, so this reasoning can be set aside. Alternatively, he may have been mindful of countering Lower’s claim. He introduced an argument which selected Plantebene and Planterose instead of Plantagenet; and, in his zeal to dismiss Lower’s claim, was he over-reacting by dismissing ‘offspring’ also, since it might be used to bolster an exaggerated Plantagenet claim? If so, this reaction is now inappropriate, since the DNA evidence indicates that the Plants are de facto offspring of a single ancestor; any Plante Genest claim now hinges on the prospects for obtaining adequate Y-DNA from Plantagenet remains. The DNA evidence that Plant is a single-family name strengthens the case for ‘offspring’ as compared to ‘gardener’.

As Reaney’s ‘gardener’ opinion is now being challenged, it is appropriate to raise a further question. Was it politeness that caused Reaney to omit the thirteenth-century by-name Plantefolie while using Plantebene and Planterose as key planks in his arguing for a ‘gardener’ meaning for Plant? Omitting Plantefolie affects the deliberations. A literal meaning of the thirteenth century English by-name Plantefolie is ‘wickedness shoot’, which might either be a metonym (synecdoche) for a ‘male generator of bastards’ or, with the offshoot

---

sense, it might mean metaphorically a 'bastard child'. We can compare the metonymic sense, to wit a 'male generator of offspring', with other names such as Topladly, Tiplady, Toplass, Topliss, Shakelady, Fullielove, Paramore, Sweetlove, Spendlove, Lemon ('lover', 'sweetheart'), Blandamer (from Pleyn d'amour, cf. Fullielove), and perhaps also for example Pullrose, Breakspair, and Whitehorn, not to mention many obscene by-names.\(^{27}\)

Though the early names Plantebene, Planterose and le Planteur have been used to propose a gardener meaning for Plant, they may also, like Plantefolie, be taken to be names of philandering or be converted to an 'offshoot' sense. The thirteenth-century English name Plantefolie should be considered at least equally with Plantebene (rare) and Planterose (mainly French).\(^{28}\) We then have, more than gardening:

\[\text{Plantefolie: 'wickedness shoot' or 'planter of wickedness' or 'bastard offspring';} \]
\[\text{Plantebene: 'hallowed shoot' or 'planter of seed' or 'pleasant offspring'; and,} \]
\[\text{Planterose: 'risen shoot' or cf. Pullrose or 'grown or courtly child'.} \]

A 'generator of offspring' sense may have been salient for le Planteur,\(^{29}\) though sense as 'the founder'\(^{30}\) can be substituted for 'the begetter'.

As well as Plantefolie, Plantebene, and Planterose, it seems relevant to consider a possible cultural influence from the name Plante Genest. Though evidence is lacking for the early use of the Plantagenet name in the royal line, which descended though Plante Genest's son,

\(^{28}\) The name Planterose, which is found mostly in France, may be associated with the early-thirteenth-century poem the *Roman de la Rose* whose rose has been illustrated obscenely as well as with courtly connotations. S. Huot, *The Romance of the Rose and its Medieval Readers: Interpretation, Reception, Manuscript Transmission* (Cambridge, 1993), p. 292.

\(^{29}\) Names based on arable occupations were rare, seemingly because such trades were too common to serve as a means of distinguishing one name from another. McKinley, *A History of British Surnames*, p. 133.

\(^{30}\) *Oxford English Dictionary*, s.v. plant, v, sense 3.a.
Henry II, early Plant-like names can be associated with a cadet line, which descended through Geoffrey Plante Genest’s illegitimate son, Hamelin. It was Hamelin who fathered the subsequent de Warenne line; and, since the Plant name is found in proximity to that line (Appendix A), there could have been some cultural influence from the Plante Genest nickname. Plante Genest had been the founder of the Angevin Empire, which included England by marriage. The sprig of broom meaning of his nickname is an instance of a hairy shoot; earlier, the ninth-century founder of a new Duchy of Aquitaine had been Bernard Plantevelop (or Planta Pilus), which means ‘hairy shoot’. Given the ‘Creation is Birth’ metaphor, the Plante Genest emblem is apt for a generator of a realm: there was a sense of the Lord’s planted creation for this name. The Pearl poet of the later-fourteenth-century de Warenne and Plant homeland wrote of God’s creation with: ‘that wyz that al the worlde planted’.

A theme can be associated with Plant-like names: the role of man and God in generation and creation. For a surname, the generation of children is pertinent. The thirteenth-century scholastics taught that a man’s offspring was only vegetable and animal until it received an intellectual component of soul from God. There is particular reference in Middle and early English texts to receiving the Lord’s planted vertue to grow straight; and, for this, one petitioned the Lord.

---

32 'I wyl speke of the people \& realme/ that I may edifie it/ and that I may plant it. Erasmus, d 1536, De immensa dei misericordia: A sermon of excedyng great mercy of god, made by ye moste famous doctour maister Eras. Rot. Translated out of Latine into Englishhe, at the request of the moste honorable and vertuous lady, the lady Margaret countesse of Salisbury (London, 1526), (Bodleian Library, STC 2nd edn, 10474.5).
35 H. Kurath and S. M. Kuhn, Middle English Dictionary (Ann Arbor, 1930–2001), s.v. plaunten, v, sense 2(c).
This theme is apparent in some variant spellings: there was a sense of generation for the name Plente; and, for Plaint, there was a sense of an appeal to the Lord. The spelling, *Plente*, occurs as early as 1219, with William *Plente* in Kent, and Radulphus *Plente* having responsibilities for reparations to the royal palace and for the burhbothe of Oxford. As well as being recognised in the *Middle English Dictionary (MED)* as a variant spelling of *plante, plente* has meanings generosity, abundant, or fertility. Putting these together with the three powers of man’s vegetable soul, gives nutritive generosity, abundant growth, and fertile generation. Another spelling is *Plaint*. As well as a lament to God, a *plaint* can mean a petition. In the 1394 Calendar of Inquisitions, there is reference to John *Plaint*, aged 60 years or more, as a principal witness at Lincoln to the proof of age of a son of John of Gaunt’s mistress Catherine Swynford formerly Roet.

For *Plantefolie* and *Plantebeine*, there is a dichotomy between planting wicked love or hallowed seed, with two kinds of love: carnal; and, divine. Love for the Lord was like the *‘plante of pees’*, according to William Langland, and this could have various senses alongside those of the ‘planting of seeds’ or the ‘young vine of peas’. In some manuscripts of Langland’s text, the spelling is *plente* suggesting the ‘plenty of peace’; or *planete* suggesting the ‘planet of peace’ (Mercury) which can represent Jesus, as does the vine; or *playnt* suggesting

36 [...] *plant in children comuenable and good adversmente and.preceptes, whereby the yonge spryng of vertuous maners shall grow streyght. The growth of such plantings was associated with human offspring:

> vertuous doctrine In her so dyd water a pure perfte plante, Which dayly encreased by sufferance devyne, Merveyously growynge in her freshe and varmaunt [Henry Bradshaw, d 1513]51

> Grete God ws graunt that we have long desirit, A plaunt to spring of thi successioun [Dunbar, 1500–20]52

> his Grandchild [of Sir John Savage], then a young Plant and newly sent to the Innes of Court, to be trained up answerably to his Birth and Dignity [...] That hopeful Plant, that is the apparent Heir of all his glory and this great Discent [Mr William Webb’s 1621 account of the Hundred of Macclesfield]53

With the phrase ‘Heir of all his glory and this great Discent’, the last of these texts seemingly refers to the inheritance of soul implantations from both God and man. This text, for the main Plant homeland, is in keeping with the plurality of an interpretation of the earlier East Anglian names Plauntes (1275) and de Plantes (1282) (Appendix A). Given the context of thirteenth-century scholasticism, de Plantes can be interpreted as ‘from God and man’s plantings’. Though a tender young plant might be associated with frailty, a planting of the Lord’s vertue brought strength to a young offspring of man.

> There is also the name de la Plaunt. This name seems relevant in as much as it appears amongst some Rouen merchants in 1273: one is called Plaunt55 and two are called de la Plaunt.55 Though Weekly’

52 H. Bradshaw, Book I, When Phebus had ronne his cours in sagittari, ll. 603–06, from The Life of Saint Werburge of Chester, Early English Text Society, original series 88 (London, 1887), p. 29.
suggested sense is 'from the plantation', an alternative etymology can be outlined for _de la Plaunt_. Generation lies near the prototypical heart of the early word _plante_: the Latin meaning of _planta_ is a 'shoot for propagation', and there is reference in early English books to an offshoot being like a child and to the planting of children in marriage. In thirteenth-century scholasticism, the generative was joined, in the soul, with the direct creation by God of the intellective. Generation, with God's husbandry, seems central to the meaning of Plant-like names. Such sense as 'from God's vine' is possible for _de la Plaunt_, as the Bible represents men as plants in God's vineyard (Isaiah 5:7), or as the branches of Jesus as the vine (John 15:1–5). In medieval times, there was also a grounding on man's vegetable soul with its powers of nutrition, augmentation, and generation: contemporary depictions of so-called Green Man heads show a plant or vines or tree foliage issuing forth from the orifices of a man's head, and this can be considered to represent his vegetable soul, carrying augmentative and generative powers, within him and beyond. Taking the family tree or vine metaphor, or taking onymy implying a man with a vege-

57 _nature hath provided that in our chyldren [...] we may be renewed [...] nature [...] maketh one thynge to yssue out of an other (lyke as a yong plante whiche is cut of, from ye tree springeth fresly vp_. Extract from Erasmus, d 1536, _A right frutefull epysile, deysed by the moste excellent clerke Erasms [sic], in laude and prayse of matrimony, translated in to Englyshe_, by Rychard Taunour (British Library, STC 2nd edn, 10492).
58 _have respect to the condicions of thy spouse, out of whom thou desyrest to plant chyldren._ Extract from Henrich Bullinger, 1504–75, _The golde[n] boke of christen matrimonye moost necessary [and] profitable for all the[m], that entend to lye quiete and godlye in the Christen state of holy wedlock newly set forthe in English by Theodor Basil_ (London, 1543), (Bodleian Library, STC 2nd edn, 4047).
table soul or a generative shoot, the sense becomes 'from the (tree or vine)\(^{61}\) shoot' for *de la Plaunt* (rare) which is essentially the same meaning, 'offshoot/offspring', as seems likely for Plant.

Though similar meaning is found in archaic English, it is particularly in Wales that *plant* literally means 'children' and *planta* means 'to beget children'.\(^{62}\) We might consider that the hereditary Plant surname originated independently in its principal homeland, near the Welsh borders. However, there is also the consideration that the surname may have arrived in its main homeland with the de Warennes in the mid-fourteenth century from a widespread by-name or surname formation for this single Plant family, in places as far away as Norfolk from Wales (Appendix A). The possibility of a Welsh 'children' reinforcement to the 'offshoot' meaning of *Plante* can then be guided by a reported finding that distance from Wales is not the sole factor in explaining the choices made by Welsh migrants into England.\(^{63}\) Even in the fourteenth century Poll Tax returns for far away Essex, where the spelling *Plaunte* was first recorded in 1262,\(^{64}\) there are several names derived from Wales: five Walleys, two Walshes, one Welsche, one Walschman, one Wales, two Gryffins, and one Ewen, as well as several people whose name had been derived from Gough. To this, it can be added that the name William *Plente* (1272–84) coexisted with William *Plaunte* (1275) in Norfolk, though it is not clear how directly the Plant surname related back to the 1219 spelling *Plente* and to a Welsh influence from the 1225 marriage of William de Warenne to Maud Marshall of Pembroke. If we consider a Welsh influence, as well

---

\(^{61}\) A Middle English meaning of *plant* is a 'young plant, or young vine, or young tree' (*Middle English Dictionary*, s.v.).

\(^{63}\) The (incomplete) poll-tax returns (1377–81) indicate that Hereford and Shropshire offered good opportunities for settlers arriving from mid-Wales, but the (full) tax returns of 1381 for Gloucestershire note far fewer Welshmen and women. It is surprising to find that Leicestershire (in 1379) apparently contained far more Welsh settlers than did Gloucestershire or Lancashire. Hey, *Family Names and Family History*, pp. 57–58.

\(^{64}\) Pleas of the Forest (PRO).
as an influence from the spelling *Plente*, it would seem that a ‘fertile’ sense to *plente* and a ‘children’ sense to *plant* could have emboldened a metaphorical mapping of the ‘offshoot’ sense for *plante*, up the Great Chain of Being, to give ‘offspring’ for the surname.

The probability that ‘offspring’ was the most salient meaning of the Plant name is increased, it would seem, by the fact that my searches reveal that, as well as a Welsh influence, the Child by-name or surname occurs in proximity to early evidence for the Plant name (Appendices B and C). Given that there were those who understood that *plant* translated to ‘children’ and the surname Child existed locally, it seems reasonable to suppose that the meaning of Plant was ‘offshoot’ (as in Old English and French) implying ‘offspring’ (as in Welsh). This does not reveal whose offspring. The planted *vertues* of the Lord had nurtured a spreading vine of ‘offspring’ from a ‘sprig’ of man’s generation. The founding father of the Plant offspring apparently lived early and his identity is not known: the name was ramifying in the thirteenth century, around de Warenne lands, and Plant is known to have been hereditary by the fourteenth century. Since then, the surname has remained widespread, with a developing distribution; but, the DNA results show that even a widespread name can belong to a single family. The meaning ‘offspring’ is apt for the offspring of this single-family.

**Acknowledgements**

The county boundaries in Figure 1 have been drawn using digital boundary data; and, to this extent, this work is based on data provided through EDINA UKBORDERS with the support of the ESRC and JISC and uses boundary material which is copyright of the Great Britain Historic GIS Project, Portsmouth University. I am grateful to Mr W. Keith Plant of the Plant Family History Group for publishing over many years in *Roots and Branches*, which is the Group’s in-house journal, my investigations into the origins of the Plant name, and for contributing some information about the Plants; also, to Professor Mick Short of Lancaster University for recommending relevant reading on cognitive metaphor theory; and, to David Hey for suggesting that this work may make a suitable short article for *Nomina*. 
APPENDICES

A Early evidence for Plant in association with de Warenne lands

In 1164, Geoffrey Plante Genest’s illegitimate son, Hamelin, married Isabel de Warenne and thereby acquired the title of the earldom of Surrey. Their son and heir, William de Warenne, married Maud (Matilda) Marshall of Pembroke in 1225 who was the widow of Hugh le Bigod, earl of Norfolk, whose son and heir had a butler and serjent who is called Roger Planteng or Plantyn or Plantin in Norfolk records (1254–68). Early spellings of the Plant name occur nearby: Plente (1272–84) and Plantes (1275) in Norfolk; Plante in Cambridgeshire (1279), and, de Plantes in Huntingdonshire (1282).

The Plant name is found near de Warenne lands in Sussex, Somerset, north Wales, north Norfolk, and east Cheshire. In c.1280, ‘Robert Plente of Saltforde, once bailif of Marsfelde’ is mentioned in records for Bath. Maresfield adjoins the de Warenne honour of Lewes in Sussex, and Saltford adjoins the de Warenne manor of Charlton in Somerset. In the late-thirteenth-century Welsh Wars, William’s son and heir, John de Warenne, was assigned responsibility for the commissariat; and, in 1301, Richard Plant was granted a license to dig coal at Eweloe, near the de Warenne land of Bromfield and Yale near Chester. The last de Warenne earl died in 1347 without legitimate heirs, and his illegitimate son, Sir Edward de Warren, settled at Poynton in east Cheshire. There is a 1352 complaint about the removal of goods by James Plant and thirty others from the erstwhile de Warenne hundred of Gallow and Brothercross in north Norfolk; these thirty-one had twenty-six different surnames, seven of which subsequently appear around Macclesfield.

manor adjoining the new de Warenne seat at Poynton: Plont; Halle; Kent; Knyght; Lovell; Nichol; and Bataille or Batiller. 73

There is a little further evidence that is consistent with an early de Warenne connection, though there is no evidence of a genetic connection between this nobility and the Plants. The Plant blazon, ‘AR. A LABEL IN BEND AZ. IN CHIEF A ROSE GU.‘, can be considered alongside the de Warenne context as well as the Lancastrian red rose. The Plant blazon indicates illegitimate cadetship with a subsequent allegiance to the red rose. The de Warennes themselves were in illegitimate cadetship to royalty, and they succumbed to the Lancastrians after having feuded with them c.1320. It is possible that the Plants reflected that cultural tradition, though their blazon does not reveal their status within such a setting. The status of the de Warennes themselves was much reduced after the mid-fourteenth century.

B The name Child and a Welsh influence in early proximity to Plant
The meaning ‘offspring’ seems likely for the Plant surname, in view of its proximity to the name Child and a Welsh influence.

B.1 Early records in East Anglia
As already mentioned, there were Welshmen in Essex, where there is the first evidence for the spelling Plaunte; also, in Essex, there is a Child in the 1377 returns and two named Chylde in the 1381 returns. In the Norfolk Poll Tax returns, for the erewhile de Warenne hundred of Gallow and Brothercross, there were in 1379 Thomas Child and Henricus atte Chiderhous; and, more widely throughout Norfolk, there are three others with the name Child, one Chylde, one Childes and two more called Childerhous. To the south in Suffolk, there is Johannes Waleys and Johannes Child for Blackbourne hundred in 1377; and, more widely in Suffolk in 1381, there is a Chylde, a Childerhous, a Childerston’, two more spelled Chilstreston’, and a Pulrose’ in keeping with the metaphor for planting children.

B.2 The Cheshire/Staffordshire Plant cluster
No Child has been found in the (scarce) Poll Tax returns for Staffordshire; but, between Staffordshire and Wales, in the 1381 returns for Shropshire, at Donnington, there are records for a Johanne Child cult’ 2s 6d and a Wilemius Child s’ 12d. There is no surviving fourteenth-century Poll Tax

return for Cheshire; but, in the 1660 Poll Tax and 1664 Hearth Tax returns for Northwich hundred, there are seventy-two names of Welsh origin, and nine references to Child(e) in the index to accompany the eight references to Plant. There are several references to Welshmen in Macclesfield manor in the later-fourteenth century (Appendix C) where there is the first evidence for the hereditary Plant surname in its main homeland.

C Welshmen in Macclesfield manor in the later-fourteenth century

A. M. Tonkinson mentions various Welshmen in Macclesfield manor in the later-fourteenth century, often in connection with affrays. Swords were carried by at least two outsiders from Wales.

David Goldbourn also known as ‘le Walshemon’, servant of Thomas Fitton, and his concubine were described as common breakers of gardens in the borough. In March 1375, he was indicted for an assault on another Welshman and the near amputation of Matthew Walshe’s hand with a baslard.

Two homicides in Macclesfield borough involved Welshmen. Ellis of Flintshire killed David ap Gron in 1371 and Arthur Wodehale killed William Walsh in 1380.

In 1371 Robert Coleman, a Welshman drew a knife on Thomas son of William Spycer at Wallgate. In 1388 Griffith the Welshman raised a stick to strike William Slegh in Rainow and was struck with a stick by Reginald Cook. In June 1391 two men, led by Reginald the Welshman of Haddon, lay in wait for Richard Hubart at Marpole, wounded him on his head with a sword and then mutilated all his limbs.

Society for Name Studies in Britain and Ireland

Essay Prize

1. A prize of £100 will be awarded annually for the best essay on any topic relating to the place-names and/or personal names of England, Ireland, Scotland, Wales, Man or the Channel Islands.

2. Submissions are invited from all students and other researchers. The prize will normally be awarded to those who have not previously had work in onomastics published.

3. Essays should be about 5,000 words in length.

4. Essays should in some way make an original contribution to the subject.

5. Two copies of the essay should be submitted in clear typescript, double-spaced, and including a bibliography of source material used and of books and authors cited.

6. Entries will be judged by a panel appointed by the President of the Society, and may be considered for publication in Nomina.

7. Entries must be submitted by 31 August each year. Provided an essay of sufficient merit is forthcoming, the winner will be announced at the AGM the following year.

Entries should be sent to:
